

**Digital and sustainable  
welding gas solutions.**

**Integra<sup>®</sup> e<sup>2</sup> Cylinder and  
Gastrak<sup>®</sup> e<sup>2</sup> Service.**

# Work better and weld better with the Integra® e<sup>2</sup> Cylinder.

With a built-in regulator and Integra® Flow Optimiser, the new Integra® e<sup>2</sup> Cylinder can help you work better and weld better.

It's the only connected cylinder with integrated leak detection, flow control and surge protection, designed to reduce gas consumption.

Reduce gas consumption by at least **30%**

## Get more from less gas with our **Gastrak® e<sup>2</sup> Service.**

Designed especially for businesses using larger volumes of welding gas, the Gastrak® e<sup>2</sup> Service delivers unique Air Products technology to ensure ground-breaking gas savings and enhanced levels of safety.

Gastrak® e<sup>2</sup> Service eliminates leaks, excessive flow rates and pre-weld surge, giving you key information at every use-point and helping you lower gas usage by at least 30% to meet your sustainability targets.

With their vast expertise, our Gastrak® Service team analyses your current welding process and works closely with you to deliver substantial savings and better management of your resources.

Helping you get **more** from **less** gas.

- Leak detection**  
Save gas and improve weld quality: Gastrak® e<sup>2</sup> Service provides a leak test at the touch of a button; both system-wide, and at use-points.
- Flow control**  
Eliminate gas wastage and set-up time: Gastrak® e<sup>2</sup> Service automatically calibrates the correct gas flow rate for your weld.
- eco Surge protection**  
Weld with a consistent flow, saving gas: Gastrak® e<sup>2</sup> Service eliminates pre-weld surge and ensures the optimum flow rate is used.
- Flow consistency**  
Improve weld quality and reduce the need for post-weld cleaning: With Gastrak® e<sup>2</sup> Service there is no surge of gas at the start of each weld.
- Information**  
Control flow and supply of gas system-wide, and at use-points: The Gastrak® e<sup>2</sup> Service Control & Display Unit enables full control on the factory floor.
- Connectivity**  
Measure your savings: Flow rates, leak-test status and consumption history per installation and use-point are available through a secure online dashboard.

### Built-in regulator

Never buy, connect or repair a regulator again.

### Flow consistency

The Integra® e<sup>2</sup> cylinder and IFO ensure flow is consistent through the life of the cylinder saving you even more gas. With a traditional cylinder and regulator, flow rates increase as cylinder pressure decreases.

### Flow control

The built-in regulator, quick connect gas outlet and pre-set Integra® Flow Optimiser (IFO) eliminate set-up time and stop excessive gas waste.

### eco Surge protection

The unique valve reduces pre-weld surge so you can be confident that the Integra® e<sup>2</sup> cylinder will help save gas and ensure you weld with a consistent flow.

### Leak detection

A leak test is performed at the touch of a button, ensuring you don't waste even the smallest amount of gas.

### Information

You'll always know how much gas is left, thanks to the electronic contents indicator and low-level alarm.

### Connectivity

The free app lets you remotely check gas type, leak test status, gas contents, consumption history and remaining arc time, to put you in full control.

### Improved safety

Integra® e<sup>2</sup> cylinders are smaller, lighter and easier to handle than traditional cylinders.
